

Probing white matter microstructure at high spatial resolution combining CHARMED protocol optimization and a high performance gradient set

Bastiani, M., De Santis, S., Jones, D., Assaf, Y., Roebroeck, A.

Program Number: 4455
Computer No.: 44

The CHARMED model of white matter

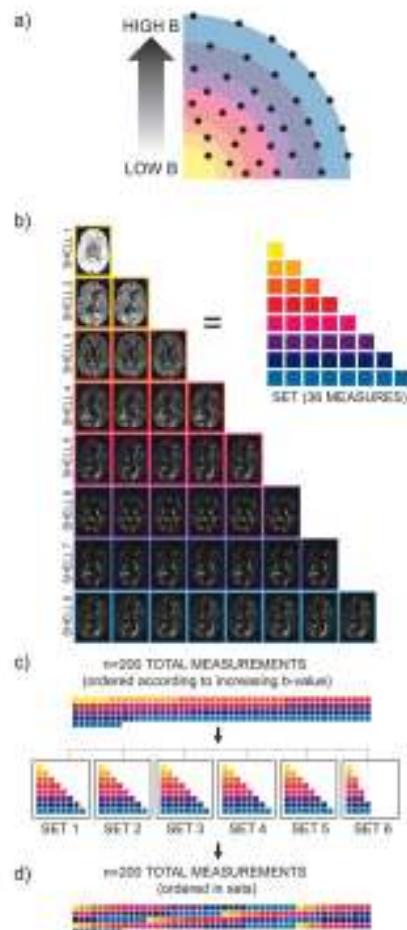

- Multiple compartment model based on diffusion:
 - Restricted diffusion in cylinders of radius r (NEUMAN 1974)
 - 3D Gaussian displacement distribution (DTI)
- Resolves crossing fibers

$$E(\mathbf{q}, \Delta) = fr^* E_r(\mathbf{q}, \Delta) + fh^* E_h(\mathbf{q}, \Delta)$$

Protocol optimization

SCHEME UNEVEN

SCHEME EVEN

SCHEME EVENSAME

De Santis, et al. (2013)

High performance gradients

- dMRI & the Prisma

- Big gradients
 - 80 mT/m amplitude
 - 200 T/m/s slew rate
 - 50cm Field-of-view
- Big coils

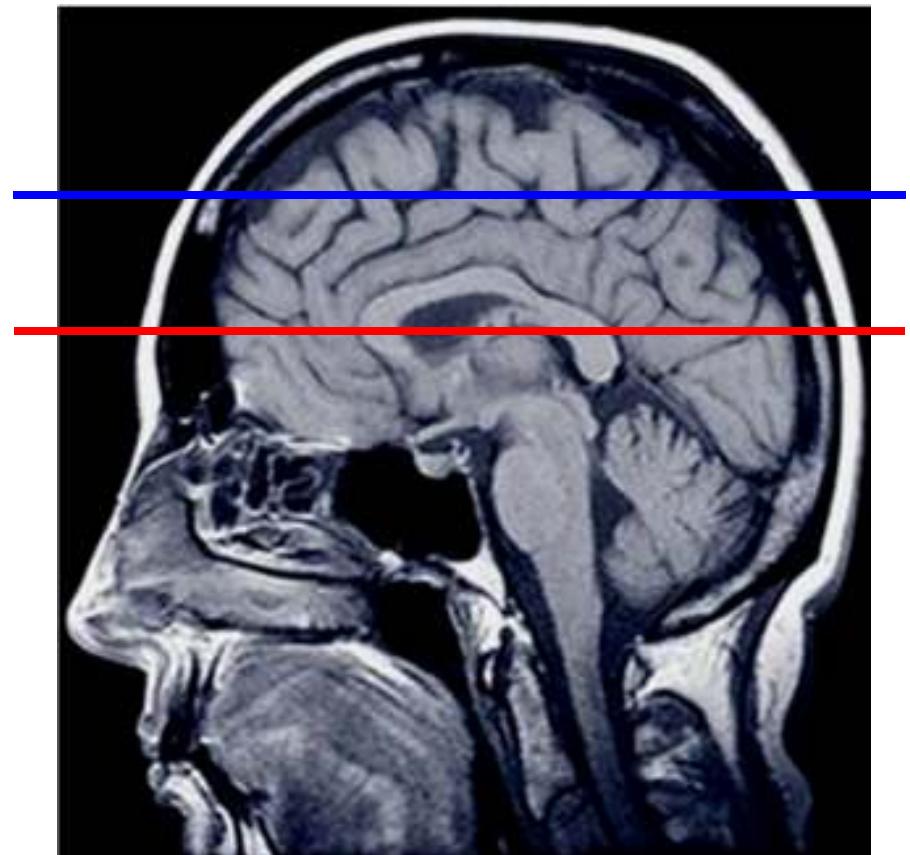

- Improvements for dMRI

- High spatial resolution
- High b-value
- High coverage

Multi-band imaging

- Excite ***multiple*** slices simultaneously
- Each coil yields a linear combination of signals from the different slices (weighted by sensitivity profiles)
- Matrix inversion provides a solution to separate slices

Moeller, Yacoub, Auerbach, Ugurbil ISMRM 2008; # 236
Magn Reson Med, 2010. 63(5): p. 1144-53.
